

Eliott Velarde

Backend Software Engineer | TypeScript & Go

Lima, Peru | +51 944 181 210 | contact@eliottvelarde.com | linkedin.com/in/eliott-velarde | github.com/EliottV17

SUMMARY

Backend Software Engineer with hands-on experience building scalable REST APIs and concurrent background workers using TypeScript, NestJS and Go. Focused on clean architecture, efficient data modeling, and automated testing to ensure software maintainability. Proven track record working across collaborative remote teams, translating design and system requirements into high-performance production code.

SKILLS

Languages: TypeScript, JavaScript, Go, SQL

Frameworks: NestJS, React, Express

Databases: PostgreSQL, PostGIS, MongoDB

Tools & Practices: REST APIs, JWT Authentication, Git, Docker, Testcontainers, GoTest, Jest, OpenAPI, Scrum, CI/CD

WORK EXPERIENCE

Backend Developer — Meevent, Remote

Apr 2026 – Jul 2026

- Standardized backend API communication by implementing OpenAPI documentation for REST endpoints, reducing front-end integration time by 20%.
- Established robust integration testing pipelines using Testcontainers and automated coverage tools to ensure API reliability.
- Integrated Cloudinary for media handling and shipped a public event slug feature for shareable event pages.

Frontend Developer (Intern) — SimplyTechnologies, Remote

Jul 2025 – Dec 2025

- Migrated Routeiq's web interface from a legacy stack to React with TypeScript, building components directly from Figma designs and reducing runtime type errors through strict typing.
- Collaborated closely with backend engineers to define API contracts, ensuring smooth integration across an international remote team.

PROJECTS

Gym Buddy — Location-Based Matching App — Personal Project

Jul 2026 - Sep 2026

- Designed and engineered a scalable matching API using NestJS and PostgreSQL to process and pair nearby users based on complex training profiles.
- Implemented high-performance geospatial queries leveraging PostGIS operators to compute real-time location-based pairing within strict radius boundaries.
- Architected a secure authentication layer using JWT alongside relational data models that optimized indexing for active user discoverability and match state state-machines.

Sentinel API — Distributed Uptime Monitoring & Observability Platform — Project

Jan 2026 - Apr 2026

- **Architected a continuous observability platform (NestJS + Go)** to track the availability and latency of external endpoints at high-frequency intervals over PostgreSQL.
- **Engineered a decoupled, state-machine-driven alerting system**, triggering notifications exclusively on actual incidents or recoveries to eliminate alert fatigue and operational noise.
- **Validated high-concurrency resilience with a dedicated Go worker**, processing 5,000 concurrent endpoints and persisting 17,000+ audit logs via a bounded connection pool to prevent database starvation.

EDUCATION & CERTIFICATIONS

- Computing and Informatics — Cibertec (Graduated)
- Masterclass: System Design, Node.js, AWS & SQL — Academia X
- The Last Algorithms Course You'll Need — Frontend Masters
